

Restaurant Sales Analysis Dashboard – Power BI

A complete end-to-end restaurant sales analysis dashboard built using **Power BI**, **Power Query**, and a custom UI designed in **Figma**.

Tools Used

- Power BI – Data modeling, DAX, visualization
- Power Query – Data cleaning & transformation
- Figma – Custom dashboard background design

Key Insights

- Total Orders: 5,000
- Total Income: 159,220 SAR
- Sold Items: 12,000
- Peak Hours: 2 PM & 6 PM
- Top Items: Korean Beef Bowl, Cheeseburger, Tofu Pad Thai
- Best Days: Monday & Sunday

Data Preparation

- Cleaned raw data using Power Query
- Removed duplicates, fixed data types, normalized categories
- Built a star schema model
- Created DAX measures for KPIs and time intelligence

Dashboard Design

- Custom background created in Figma
- Modern clean layout
- Consistent spacing, typography, and color palette
- Focus on readability and storytelling

Files Included

- Restaurant_Sales_Analysis.pbix
- Figma background (PNG)
- Dashboard screenshots
- README documentation

Features

- Time-based analysis (Year, Quarter, Month, Day)
- Hourly order distribution
- Category & item-level insights
- Dynamic filtering
- KPI cards with DAX measures
